Prashant Mishra

prashantmishra6969@gmail.com

+919140887303 Kanpur, Uttar Pradesh, India 208020 LinkedIn,GitHub

Computer Science undergraduate specializing in AI and Machine Learning, with extensive hands-on experience in developing real-time software systems and applied machine learning solutions. Proficient in Python, C++, and Java, with a strong understanding of data structures, algorithms, and object-oriented programming. Proven track record in creating scalable applications, including real-time facial recognition systems, automation tools, and full-stack platforms. Skilled in collaborative team environments, rapidly assimilating new technologies and clearly articulating complex technical concepts in English. Seeking an Associate Software Developer Internship at Google to leverage strong engineering fundamentals while gaining exposure to large-scale, production-grade systems.

Education

Bachelor of Technology in Computer Science and Engineering, Pranveer Singh Institute of Technology, Kanpur
GPA: 7.77

12th CISCE Board, Heliger Borden Education Center, Panki, Kanpur Percentage: 90.5

10th CISCE Board, Heliger Borden Education Center, Panki, Kanpur Percentage: 86.6

Skills

- Skilled in problem solving and software development using Python, Java, and C/C++
- Proficient in JavaScript frameworks and libraries
- Version control with Git
- Experience with MongoDB and SQL database systems

Certifications

- **Google Cloud Skills Boost** – Hands-on labs in cloud computing, APIs, and software development
- **Al Agents Intensive Course with Google**– Built and iterated on AI-based solutions
- **HackerRank** – Problem Solving (Data Structures & Algorithms) Certification
- **LeetCode** – Regular practice of algorithmic and data structure problems with 240+ questions solved

all of the above mentioned profiles and certifications are available in my Linkedin Profile.

Projects

Real-Time Facial Recognition Surveillance System (Python, Streamlit, OpenCV, DeepFace)

- Designed and implemented a real-time facial recognition pipeline using FaceNet embeddings.
- Built embedding storage and distance-threshold–based identity matching for real time verification.
- Optimized frame processing and similarity thresholds to reduce latency and improve recognition.
- Implemented event logging and designed the system for future scalability across multiple cameras.

E-ShopMate – Intelligent E-commerce Platform (HTML, CSS, JavaScript, React, Next.js, MongoDB)

- Developed a full-stack platform featuring a hybrid recommendation engine and NLP-based search.
- Implemented secure user authentication, personalized product suggestions, and real-time browsing.
- Designed the platform with scalability and modularity in mind to support future feature expansion.
- Planned enhancements include deep learning–based recommendations, multilingual support, mobile app integration, and advanced analytics.

JARVIS-Style AI Personal Assistant (Python, Speech Recognition, NLP, Automation APIs)

- Built a local AI assistant capable of executing commands, opening applications, and generating code.
- Implemented speech recognition and NLP-based intent parsing for natural user interaction.
- Designed a modular command-execution architecture enabling cross-device extensibility (PC, mobile, tablet).
- Supported both offline automation tasks and online query handling through hybrid execution logic.
